

added to the application which recite the patentable feature of the invention of free movement of the fibre filaments with the respect to one another or with respect to the rigid body because the fibres are not incorporated in a matrix. This fundamental and characterizing feature of the invention is not found in the cited art. This feature is supported in the specification at page 2, line 3, page 2, lines 15-16 and page 3, lines 21-23. Further support is found at page 6 lines 18-19 and lines 22-23. With regard to capability of free movement of the fibre filaments with respect to the rigid body this is supported at page 6, lines 20-21.

Claims 26-37 have been submitted in Jepson form in which the acknowledged prior art is set forth in the preamble and the improvement is separately set forth as such.

It is requested that further examination of the application be based on the last filed amendment and the amendatory action taken herein.

Respectfully submitted,

JULIAN H. COHEN
